## Ch 1: A Cheetah's Body

What animal weighs 110 to 180 lbs? Cheetahs! Yay! Let's learn more about Cheetah's body. Do you know Cheetahs have a **flexible** spine? Also they have dots on their fur. And it's a type of cat but bigger and it's in the wild. They are even a **mammal** and they have black spots

under their eyes to protect their vision in the sun. One fact about a Cheetah's body is that they can run

up to 70 miles per hour. Additionally they are 7 feet long (2.1 meters). Another fact about a Cheetah's body is that their claws are used to climb up trees and they are

furry. A final fact about Cheetah's body is that its color is yellow and black. Now you learned about Cheetah's body!

## Ch: 2 Cheetah's Diet

What kind of animal eats tons of meat and hunts for prey? Cheetahs! Yay!

One fact about a Cheetah's diet is that they eat gazelles and impalas which look like deer. Another fact about a Cheetah's diet is that they eat meat so that means they are carnivores. A third fact about a Cheetah's diet is that they eat large

animals like Ostriches. A final fact about a Cheetah's diet is that they

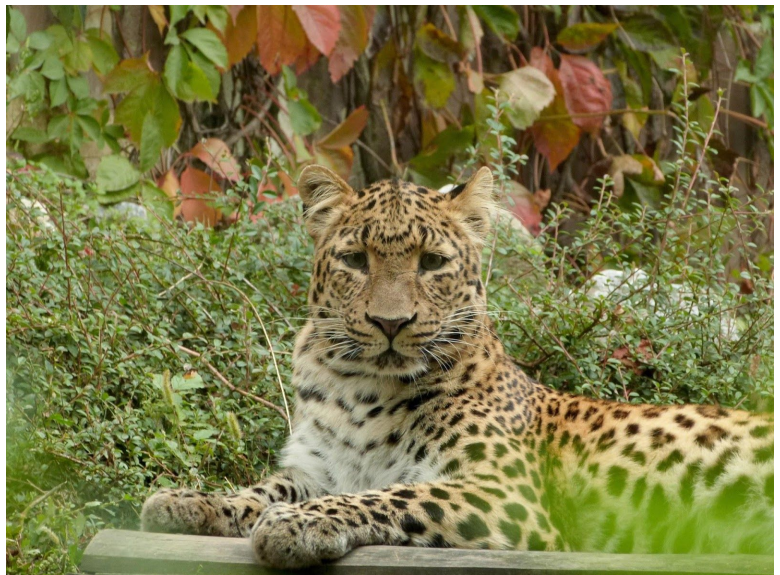

could survive without water for 3 to 4 days. That's what Cheetahs eat. What did you learn about their diet?

### Ch 3:Cheetah's Habitat

Let me tell you where a Cheetah's Habitat. My first fact about Cheetah's habitat is that they live in Southern Africa in the open areas woodlands.

Another fact about a Cheetah's habitat is that they live in the wild and in the flat grass. My third fact about a

Cheetah's habitat is that they live in areas with a little bit of trees. My final fact about a Cheetah's habitat is that

they live in open areas because it's easier to hunt. This concludes information for a Cheetah's habitat.

### Ch 4 : Cheetah's Life Cycle

It would be interesting to learn about a Cheetah's Life Cycle! One fact about a Cheetah's life cycle is that **female** Cheetahs give birth to three babies at a time. Another fact about a Cheetah's life

is that baby cubs could live for 10 to 12 years. My third fact about Cheetah's life cycle is that

cubs are less than one foot(0.3m) long and they **weigh** about ten ounces(248.g). My final fact about a Cheetah's life cycle

is that baby cubs have dark fur and their spots are not clear. What did you learn about Cheetahs Life Cycle?

## All About the Author
