

# ALL ABOUT Gray WOLVES

BY Lamira Epenza

## Ch.1: All About a Grey Wolves Body

I'm researching about wolves. This chapter is about a wolves body. One fact about wolves is that wolves are Mammals. Wolves have thick fur. They have 8 to 20 members and wolves have 4 long fangs. Also, wolves hunt together and it's called packs. I

learned that wolves are meat eaters and they use their fangs to hunt for prey. Wolves can smell up to 4 miles away!!! They have a strong sense of smell. That's why I researched about wolves!!! What did you learn from this chapter? I hope you learned a lot about what wolves look like.

## Chapter 2: All About a Gray Wolves Diet

Let me tell you about gray wolves and what they eat. My first fact is that two wolves are meat eaters. Another fact is that the

adult wolves learn while they are a cub to catch prey on their own. When wolves hunt, they do it in a group called a pack. Wolves eat turkey and fish. I hope you learned a lot about wolves diet. What facts did you learn from this chapter?

### Chapter 3: All About a Gray Wolves Habitat

Oh, hello! Do you want to learn about a gray wolves habitat? My first fact is that wolves are found in North America and Asia. One fact about

wolves habitat is that they live in groups called a pack. Wolves protect their cubs from getting captured. Also you can find wolves in the zoo. Make sure to look for them there. I hope you learned a lot about gray wolves habitat guys!
